Crystal Reports

"Crystal Reports is great...we can make our documents look however we like. It gives us lots of choices, like either landscape or portrait formatting, or positioning text with center or left justification. These options really enhance the appearance of our reports."

Leigh Scott, Systems Manager
Ledford Medical Electronics

FEATURES

Sub-Reports

These may be embedded in a main report so that you can insert information from different tables with different formats into any section of a report. For example, you can embed your income statement into the balance sheet and pull the net income figure into the balance sheet.

Conditional and Multiple Section Reports

This feature lets you specify special conditions for each section of a report, allowing one report to produce several different outcomes.

Enhanced Cross-Tabulation Objects

You can present summary information in a single cell, replacing columnar report formats.

Form-Style Reports

This feature allows for printing with greater precision on pre-printed forms using new guidelines and text objects.

Mail-Merge Capabilities

You can combine database information with letters or other text objects, and specify selection criteria to target specific groups of customers.

Report Design Control

Improved user interface gives more power and control over report design by letting you customize your design environment. You can also use a drawing model instead of a pre-defined grid for more accurate placement of data fields.

Control Formatting with Formulas

Data can be displayed in a different color or underlined to put emphasis on a particular cell and its value.

Enhanced Graphing Capabilities

You can graph on details, formulas, and subtotals, and you can choose from several graphical formats.

Report Distribution Capabilities

With Crystal Reports, you can publish reports to the Web with automatic HTML output, presenting embedded graphs and other features of the original report. When exporting to Word and Excel, images, lines, boxes, and color are included. You can send e-mail reports in any of the output formats supported within the Crystal runtime viewer.
