When you need a system that can handle more users and more data, then you may want to think about stepping up to Sage MAS 200. More growth and changing business needs demand a more robust business management solution, Sage MAS 500.

Sage Software's family of accounting solutions was designed to make your transition toward more powerful business management capabilities easy. After all, when your business grows, the last thing you want to worry about is whether your business management software can handle the changes. But you also know that having the right tools at the right time can be critical to the success of your growing business.

Are you experiencing any of these growth-related challenges?

- An increase in transaction volume, users or data
- The need for more advanced accounting capabilities, including complex allocations, consolidations or multi-currency processing
- Operational expansion such as multiple locations or remote warehouses
- Frequent stock-outs or excess stock
- Difficulty forecasting material demand or maximizing work center capacity

If so, the day has come to upgrade your software. And we're here to help you do it, without worries.

Sage MAS 500—Step Up to Advanced Capabilities.

Sage MAS 500 offers ease of use, flexibility, a broad choice of industry-specific modules, and smart core functions. Plus, with Sage MAS 500, you can handle lots of users, large volumes of data, and complex accounting, manufacturing, and distribution processes. You'll need these new capabilities to be efficient, competitive and profitable in your growing business. Finally, Sage MAS 500 was designed so that your data can be converted from Sage MAS 90 with minimal disruption and expense.

Here are just a few of the many ways that Sage MAS 500 can help you manage your business better today-and tomorrow:

Accounting

- Group customers by parent company while still allowing payments between accounts
- Perform advanced accounting and consolidated reporting across multiple currencies, locations and companies
- Optimize project profitability with robust project-based budgeting, forecasting, and time and expense tracking.
